Dinh**Filed: **September 15, 1998**Group Art Unit: **2841**For: **HEAVY-DUTY AUDIO EQUIPMENT**Assistant Commissioner for Patents  
Washington, DC 20231**INFORMATION DISCLOSURE STATEMENT**

Dear Sir:

In compliance with 37 CFR §§1.56, 1.97 and 1.98, Applicant hereby submits a copy of DE 1665772, and request that this document, which is listed on the attached form PTO-1449, be made of record in the above-identified application. A copy of this document is enclosed herein.

Pursuant to 37 CFR § 1.98(a)(3)(1), the following is a concise explanation of DE 1665772:

DE 1 665 772 (German Patent Application P 16 65 772.0) was published on January 21, 1971. It describes an arrangement for vibration and impact damping in cuboid-shaped housings or frames for receiving electric appliances, in particular portable appliances for electric information technology and measuring appliances.

The corners of the frame are flattened so that a plane triangular surface exists to which a corner element (13) is attached which consists of a metal plate (19) partially enclosed by rubber material so that the corner element (13) will engage with the outer

**UTILITY PATENT****Docket No. P-US-TN1444**

corner surface of the frame through a protruding rim (22 in Figure 2) of rubber material.

The outwardly projecting surface of the rubber material is covered by a metal cap (26) which either forms a recess (23) or a projection (20) so that adjacent frames are stabilized due to engagement of projection and recess.

The corner element is fixed to the plane corner surface of the frame by means of a damping element (16) which consists of an essentially cylindrical rubber element to the end surfaces of which metal plates (18) are fixed which carry screwbolts (17). By threadening the screwbolt (17) which projects through a hole in the corner surface, into a tapped hole (9 in Figure 2) of the corner element this corner element is fixed to the corner of the frame.

In the frame guide and support rails (1, 2, 3, 4 in Figure 3) for guiding and supporting the appliances (11) are provided. The rails (4) located at the edges of the frame are mounted on the inwardly projecting screwbolts (17) of the damping elements (16). The appliances may be attached to the rails by means of screws.

To discuss any aspect of this disclosure statement, or any other aspects of this application, the Examiner should call the undersigned Applicant's representative.

Respectfully submitted,

Adan Ayala
